Nestlyzer data gaps

What is still being collected (2.10.1)

Generated by `build/gap_analysis.py` from the current build. `best_level_now` is the most local level the build already has for that topic in that country; `context_now` says whether imported context records (rent/pay release and Master V7) already cover it for some linked places. Status: **missing** (nothing), **national only**, **deepen** (district or region only, place level wanted).

Delivery format (same for every task)

`values.csv` with `cc,level,code,field,value,unit,period,source_id` (level `place` with the exact Nestlyzer oid; `nuts3/county` only when no place level exists), plus `sources.json` (publisher, dataset, URL, licence allowing commercial reuse with attribution, period) and `REPORT.md` (join rate, 3 spot checks, gaps). Official publishers only, latest period, missing stays missing, no normalising of incomplete shares. Industry structure: see `ChatGPT_Task_Industry_Structure.md`.

Top 60 tasks by impact (places x topic weight)

#	Country	Places	Topic	Now	Context	Status
